9 % Pakistani households (around 3 million) say that in the last two months they have missed a required vaccine for a child: Gallup & Gilani Pakistan

(Islamabad), April 26, 2021

According to a survey conducted by Gallup & Gilani Pakistan, 9% Pakistanis said that they missed a required vaccine for a child of their household who is under the age of 10.

A nationally representative sample of adult men and women from across the four provinces was asked the following question, *“In the last two months, did you miss any required vaccines for any child in your household who is under the age of 10?”* In response to this question, 9% of the respondents said ‘Yes’, 78% said ‘No’ and 13% said that they have no child under the age of 10.

Context: Due to COVID-19 related issues including mobility restrictions as well as hospitals being overworked, children are missing their regular vaccines. The purpose of this poll was to gauge the extent of this phenomenon. The findings point to a dire need to use parallel means to reach out to these 9% households (around 3 million across Pakistan) to make up for their lost vaccination.

Question: “In the last two months, did you miss any required vaccines for any child in your household who is under the age of 10?”

The study was released by Gilani Research Foundation and carried out by Gallup & Gilani Pakistan, the Pakistani affiliate of Gallup International. The recent survey was carried out among a sample of 1,590 men and women in urban and rural areas of all four provinces of the country, during March 19, 2021 – April 6, 2021. The error margin is estimated to be approximately $\pm 2-3$ percent at the 95% confidence level. The methodology used for data collection was phone interviews. Respondents hailed from over 100 districts of Pakistan.
