18% of Pakistanis know someone from their social circle who has been diagnosed with coronavirus; people from urban areas are more likely to know someone who has been diagnosed with COVID-19 as compared to those in rural areas: Gallup & Gilani Pakistan

(Islamabad), August 16, 2021

According to a survey conducted by Gallup & Gilani Pakistan, 18% of Pakistanis know someone from their social circle who has been diagnosed with coronavirus.

Complete report for Wave 11 of the COVID-19 tracker survey can be accessed [here](#).

A nationally representative sample of adult men and women from across the four provinces was asked the following question, “Do you know someone in your social circle who has been diagnosed with COVID-19?” In response to this question, 18% responded in the affirmative while 82% stated that they did not know anyone from their social circle who had been diagnosed with COVID-19.

Question: “Do you know someone in your social circle who has been diagnosed with COVID-19?”

Urban-Rural Breakdown

Respondents who live in urban areas (20%) are more likely to know someone who has been diagnosed with COVID-19 as compared to 16% in rural areas.

Urban-Rural Breakdown

The study was released by Gilani Research Foundation and carried out by Gallup & Gilani Pakistan, the Pakistani affiliate of Gallup International. The recent survey was carried out among a sample of 1066 men and women in urban and rural areas of all four provinces of the country, during July 01, 2021 – July 13, 2021. The error margin is estimated to be approximately $\pm 2-3$ percent at the 95% confidence level. The methodology used for data collection was CATI.
