43% OF PAKISTANIS BELIEVE THAT THE NEGATIVE EFFECTS OF MOBILE PHONES OUTWEIGH THE POSITIVE EFFECTS: GALLUP & GILANI PAKISTAN

43% پاکستانیوں کے مطابق موبائل فون کے مضر اثرات مثبت اثرات سے کہیں زیادہ ہیں

Some people think that the advent of mobile phones has had negative effects on society. On the other hand, others think that mobile phones have had positive impacts. Do you think that there are more negative or positive effects of mobile phones?

Opinion Poll Miscellaneous

43 % of Pakistanis believe that the negative effects of mobile phones outweigh the positive effects: Gallup & Gilani Pakistan

(Islamabad), August 6, 2021

According to a survey conducted by Gallup & Gilani Pakistan, 43% of Pakistanis believe that the negative effects of mobile phones outweigh the positive effects.

A nationally representative sample of adult men and women from across the four provinces was asked the following question, “*Some people think that the advent of mobile phones has had negative effects on society. On the other hand, others think that mobile phones have had positive impacts. Do you think that there are more negative or positive effects of mobile phones?*” In response to this question, 43% said negative effects, 34% said positive effects, 15% did not know while 8% did not respond.

Question: “Some people think that the advent of mobile phones has had negative effects on society. On the other hand, others think that mobile phones have had positive impacts. Do you think that there are more negative or positive effects of mobile phones?”

Gender Breakdown: Males are more likely to think mobile phones have more positive effects as compared to women

35% males as compared to 27% of females consider mobile phones to have more positive effects than negative. Conversely, 43% males and 42% females consider mobile phones to have more negative effects.

The study was released by Gilani Research Foundation and carried out by Gallup & Gilani Pakistan, the Pakistani affiliate of Gallup International. The recent survey was carried out among a sample of 1066 men and women in urban and rural areas of all four provinces of the country, during July 01, 2021 – July 13, 2021. The error margin is estimated to be approximately $\pm 2-3$ percent at the 95% confidence level. The methodology used for data collection was CATI.
