4% of Pakistanis compared to 6% of global respondents report that they have experienced sexual harassment in the past: Gallup Pakistan and WIN World Survey report released

(Islamabad), March 31, 2022

According to a Gallup Pakistan Survey in Pakistan (and similar surveys done by Worldwide Independent Network of Market Research (WIN) across the world), 4% of Pakistanis compared to 6% of global respondents report that they have experienced sexual harassment in the past.

These findings emerge from an international survey conducted across the globe by The Worldwide Independent Network of Market Research (WIN) - a global network conducting market research and opinion polls in every continent. WIN International has published the Annual WIN World Survey (WWS – 2021), exploring the views and beliefs of 33236 individuals, among citizens from 39 countries across the globe. On International Women's Day, WIN releases the latest results of the survey about gender equality, violence, and sexual harassment, to understand what are, if any, the improvements around the world in terms of equal opportunities and rights. The fieldwork for Pakistan was conducted between 10th October and 11th November 2021 and the sample size was 1000 individuals.

The international press release with the report can be accessed [here](#).

A nationally representative sample of adult men and women from across the four provinces was asked the following question, *"Have you suffered from any kind of sexual harassment in the past year?"* In response to this question in Pakistan, 4% said yes and 96% said no. The trend about women who experienced sexual harassment is also almost stable: 9% of women interviewed worldwide suffered sexual harassment in the last year, compared to 8% of the previous year.

Question: "Have you suffered from any kind of sexual harassment in the past year?"

The study was released by Gilani Research Foundation and carried out by Gallup & Gilani Pakistan, the Pakistani affiliate of Gallup International. The recent survey was carried out among a sample of 1000 men and women in urban and rural areas of all four provinces of the country, October 20 – November 11, 2021. The error margin is estimated to be approximately $\pm 2-3$ percent at the 95% confidence level. The methodology used for data collection was CATI.
