More respondents globally (65%) as compared to Pakistan (31%) claim to be suffering from stress: Gallup Pakistan and WIN World Survey report released

(Islamabad), April 20, 2022

According to a Gallup Pakistan Survey in Pakistan (and similar surveys done by Worldwide Independent Network of Market Research (WIN) across the world), more respondents globally (65%) as compared to Pakistan (31%) claim to be suffering from stress.

These findings emerge from an international survey conducted across the globe by The Worldwide Independent Network of Market Research (WIN) - a global network conducting market research and opinion polls in every continent. WIN International has published the Annual WIN World Survey (WWS – 2021), exploring the views and beliefs of 33,236 individuals, among citizens from 39 countries across the globe. On International Health's Day, WIN releases the latest results of the survey, to understand health self-perception and related habits. The fieldwork for Pakistan was conducted between 15th October and 18th December 2021 and the sample size was 1000 individuals.

The international press release with the report can be accessed [here](#).

A nationally representative sample of adult men and women from across the four provinces was asked the following question, *"How often would you say that you..? - Suffer from stress"* In response to this question in Pakistan, 7% said very often, 9% said fairly often, 15% said sometimes, 19% said occasionally and 50% said never.

Question: "How often would you say that you..? - Suffer from stress"

The study was released by Gilani Research Foundation and carried out by Gallup & Gilani Pakistan, the Pakistani affiliate of Gallup International. The recent survey was carried out among a sample of 1000 men and women in urban and rural areas of all four provinces of the country, October 15 – December 18, 2021. The error margin is estimated to be approximately $\pm 2-3$ percent at the 95% confidence level. The methodology used for data collection was CATI.
