

Safety: 51% of the female respondents feel safe/confident while walking alone at night in their neighborhood, which is 20% less than male respondents who feel the same (71%).

Gallup Pakistan releases comprehensive report on state of women in Pakistan in collaboration with WIN Network

Islamabad, 27th March, 2024

Gallup Pakistan has conducted a comprehensive study on gender equality, safety and violence, in collaboration with the **Worldwide Independent Network of MR (WIN) for the Annual WIN World Survey**. Gallup Pakistan is a long-time member of WIN which represents over 50 countries and their polling organizations. The survey, conducted with a diverse and representative sample of the Pakistani population, reveals the opinions and beliefs surrounding gender equality, safety and violence in Pakistan.

Access the Pakistan specific report [here](#).

The Worldwide Independent Network of MR (WIN), the world's leading independent association in market research and polling, reveals the Annual WIN World Survey, exploring the views and beliefs of 33,866 people in 39 countries across the globe. WIN releases the latest results on **gender equality, safety and violence**, to track and understand if there are any improvements around the world in terms of equal opportunities and rights.

Access the full report [here](#).

Niha Nazar, an analyst at Gallup Pakistan who compiled the Pakistani report says ‘While majority of the population (68%) feels safe walking alone at night in their neighborhood, it is imperative to recall the 20% difference in perception between male and female respondents. Although, 51% female respondents do feel safe, nearly half also disagree (47%). This makes one question the extent of gender equality actually attained in terms of access to public spaces at night without feeling a threat to one’s safety.’

Key Findings:

1. **Safety:** 51% of the female respondents feel safe/confident while walking alone at night in their neighborhood, which is 20% less than male respondents who feel the same (71%).
2. **Global Comparison:** Vietnam had the highest percentage of female respondents who felt safe walking alone at night in their neighborhood, at 91%. This is 40% more than Pakistan's percentage at 51%. Chile appears to be the most unsafe, with 83% of the female respondents stating that they did not feel safe walking alone at night.

1. Safety

51% of the female respondents feel safe/confident while walking alone at night in their neighborhood, which is 20% less than male respondents who feel the same (71%). In terms of education level, those who have completed higher education feel the most unsafe (38%), while those who have completed primary education feel the least unsafe (27%). While looking at employment, housewives tend to feel the least unsafe (45%), whereas those who work part-time feel the safest (74%).

METHODOLOGY

SAMPLE SIZE	1000
INTERVIEW METHOD	Random Digit Dialing Phone Survey Methodology
ERROR MARGIN	±2 to 3% at 95% confidence level for national level results
FIELDWORK DATES	3-17 January 2024
NOTE	Gallup Pakistan's usual approach of fieldwork is conducting face-to-face interviews in households using geographical sampling. The sampling is done using the census as the frame. Due to coronavirus lockdown, as well as health and safety concerns, we have halted all face-to-face interviews, therefore CATI methodology has been employed. This methodology uses Random Digit Dialing approach where all mobile phone numbers in Pakistan (130 million active sims) are the universe.
EXCLUSION IN SAMPLE	According to PSLM (a government survey), 90% of households in Pakistan claim someone in their household owns a mobile phone. This means that 10% households are excluded from the sample.

Net Index is calculated by deducting the Not really achieved/Not at all achieved percentage from the Definitely achieved/To some extent achieved.

DEMOGRAPHICS
